MVP: Enter desired study duration and track time spent studying versus doomscrolling.

DO	SCHEDULE
● 2 timers (one for studying and one for doomscrolling) ● Allow users to pause and resume timers ● Generate productivity report	● Save data history using File I/O ● User set scrolling limits ● Display productive trends over time
DELEGATE	**DELETE**
● Use Java's Scanner ● Use thread tools in project ● Find timer utilities in Java instead of creating a custom clock	● Depending on the time of year, the program is stricter on social breaks(test, finals season) ● Create leaderboard comparing other users' productivity - competition between friends
